

Agrosol Effect Confirmation from Kiel/Germany

[04 / 2013]

The "AGROSOL EFFECT" now also scientifically confirmed!

The first step of the mechanism of action has been decrypted. Research has finally provided the scientific confirmation.

AGROSOL makes its way into the inner leaf!

The effect was never disputed; however the mechanism of action lay in doubt. Even scientific research has till date assumed (also including the AGROSOL particle) that solid particles could not get into the inner leaf.

This assumption has now been refuted by the scientific study of Dr. Hartmut Kaiser in 2012, at the University of Kiel! The study, which had been commissioned by company AGROSolution, clearly confirmed that particles do indeed reach the inner leaf.

AGROSOL can have a physiological effect on the inner leaf and on the nutritional processes of the plant.

The exact effect will now be further explored in studies lasting several years.

Studies and field trials performed globally by official institutes and farmers all confirm the positive effect that AGROSOL has on plant growth.

AGROSOL is a pure biological product with clear results:

- greater yield
- healthier and more vigorous plants
- higher stress resistance
- improved nutrient uptake

Company AGROSolution was established 5 years ago. Since then, it has continuously gained market acceptance, sales have steadily increased and the group which company AGROSolution has named the "Innovative Farmers" continues to become stronger.
